

## Rationale

The Green Purchasing Policy provides a purchasing structure that promotes the sustainable use of resources and reduces negative impacts on the environment and human health.

## School sustainability vision and principles

In line with our Wales Street Primary Mission and Vision statement our school Green purchasing policy seeks to enable our students to be part of a diverse community-minded school dedicated to lifelong learning and helping students achieve their personal best by fostering skills and knowledge to be:

- Independent, creative and self-motivated
- active inquirers in the local and broader community
- reflective thinkers who are socially, environmentally, and digitally aware.

## Aims

- To support staff in purchasing products that maximise energy and water efficiency and minimise waste, pollution and habitat loss.
- To establish and embrace a green purchasing culture.
- To eliminate any unnecessary purchasing.
- To make purchasing decisions based on the 'Waste hierarchy and circular economy principles'.

## Waste hierarchy

**Avoid:** Identify ways of carrying out a function or task without using materials that generate waste e.g. send information electronically instead of on paper.

**Reduce:** Use less in the first place to avoid waste e.g. purchase in bulk to reduce packaging and print double-sided copies of documents rather than single-sided.

**Reuse:** Use the same item more than once and extend the life of products and equipment before replacing them. Aim to re-use or repair existing products. Ensure new purchases are durable, have a long service life and are easy to maintain and upgrade.

**Recycle:** Purchase products that contain recycled materials or those that have or can be re-manufactured or recycled.

## Implementation

Where possible, and in line with the above waste hierarchy, our school will purchase products that:

- maximise energy and water efficiency and minimise waste, pollution and habitat loss
- are environmentally preferred products when they perform satisfactorily and are available at a reasonable price
- are paper and wood products obtained from post-consumer recycled, forest stewardship council (FSC) certified, salvaged or renewable sources
- are produced locally in preference to those that have high kilometres associated with their manufacturing and transportation
- have a high star energy rating and efficiency features, or the best available within budget considering the lifetime of the product
- use renewable energy (if available) not originating from fossil fuels
- conserve water or use water in an efficient way
- will not release toxins that can affect human health and pollute or degrade water, soil or air at any stage of their life cycle and beyond their life cycle.
